III. 閱讀測驗 (36~40 題, 共 5 題)

Many people went to view the annular solar eclipse on June 21, 2020 in Taiwan. It is said if you miss this chance, you will have to wait for another 195 years to see the next

one. Therefore, many people traveled to southern part of Taiwan to see this magical phenomenon. Streets and parks are crowded with people in Chiayi and Tainan. The eclipse started at 2:49pm and ended at 5:25pm. The complete "ring of fire" took place for less than a minute at 4:14, when 99 percent of the sun's surface was blocked by the moon. However, it is harmful to view the sun directly without proper eye protection. Some people are reported to have *vision* problems after looking directly into the sun. Therefore, never watch the sun with your naked eyes. Be sure to use eclipse glasses or a Sun filter; sunglasses cannot provide effective protection.

36. Which statement is TRUE according to the passage?
(A). People went to northern part of Taiwan to watch the solar eclipse.
(B). It is common to see annular solar eclipse.
(C). Not many people were interested in watching the solar eclipse.
(D). People should wear eye protection when watching the solar eclipse.
37. How long did the "ring of fire" last?
(A). About three hours.
(B). 195 years.
(C). Less than one minute.
(D). None of the above.
38. What can be used to watch the solar eclipse?
(A). X-ray film
(B). Sunglasses.
(C). Eclipse glasses.
(D). Dark-colored paper.
39. How does an annular solar eclipse happen?
(A). It happens when the earth is between the moon and the sun.
(B). It occurs when the sun blocked the center of the earth.
(C). It occurs when the moon covers the center of the sun.
(D). It happens whenever the sun passes southern part of Taiwan.
40. The word "vision" means _____.
(A). the ability to see.
(B). being able to be seen.
(C). how far an object can be seen
(D). an idea or belief that is not true
